

## Front Row Blend

### Winter Activity and Durability

Front Row Blend is designed specifically for multi-use sports fields with an emphasis on winter play but still retaining a high degree of tolerance to summer conditions. Front Row is a 3 way blend of NZ bred ryegrasses combining varieties that have both Mediterranean germplasm, known for its winter activity, and American germplasm with its strong emphasis on fine leaf and heat tolerance. This genetic diversity results in "Year round performance".

### Uses

- Spring and Autumn undersowing of sportsfields
- Stadiums
- Municipal Grounds
- School Grounds

### Agronomic characteristics

- NZ bred varieties from US and Mediterranean germplasm
- Strong winter growth provides good recovery from all winter codes
- Varietal diversity in the blend provides for good summer heat tolerance
- Front Row Blend has strong, fast germination and good seedling vigour providing quick establishment
- Forms a fine dense sward, is medium green colour

### Seeding rates

- 30g/m<sup>2</sup> to 50g/m<sup>2</sup>
- 300kg/ha to 500kg/ha
