

MICRONA™

Greens Granulated Lime

90 SGN | 36Ca

Micro grade, calcium carbonate prills produced from high quality, natural limestone. Reacts quickly to correct low soil pH, enhance soil structure and provide essential calcium nutrition. Easy to apply and for easy blending.

BENEFITS

- 36% of Ca in the form of calcium carbonate helps to raise target pH fast
- Formulated with 90% premium-grade, finely ground calcium carbonate for easy dissolving and minimal equipment wear
- Micronised granules aid with efficient delivery of Ca and helps to improve soil structure
- Provide readily available calcium for plant uptake

TECHNOLOGY

The micronisation of natural, mined materials prior to prilling produces a highly reactive and efficient granulated product. Prill's high surface area helps with faster and complete reaction with soil acidity. MICRONA™ is robust and readily dissolves. The prilling process utilises minimal binders, enabling the prill to dissolve and become reactive more rapidly

GUARANTEED ANALYSIS

Calcium (Ca) 36%

APPLICATION RATES

250 - 500 kg/ha
or 2.5 - 5.0 kg/100m²

USE PATTERNS

MICRONA Greens - Lime can be used year-round. The round prill ensures even soil coverage. Spread MICRONA Greens - Lime and water thoroughly. Follow soil test recommendations for best results

SPREADER SETTINGS

	2.5 kg/100m ²	5 kg/100m ²
Accupro	L	O
Earthway Rotary	14	17
Lesco	E/12	F/14
CBRIV	J	M

The spreader settings are close approximations. Trial calibration is recommended before widespread use.
